

Integrated Coastal Zone Management

An overview of important sustainable developments
in Zandvoort in the 21st century

M.B.J. Demmers, alderman responsible for local spatial planning,
housing and environment

Bulgaria, Friday 8th of April 2005

Zandvoort in 2005

Important developments

- European guidelines
- Safety first
- Recent changes in modern coastal management
- Strengths/weaknesses of Zandvoort
- Continuous exchange of opinions with other national, regional and local partners
- A need to restructure

Important developments

European guidelines

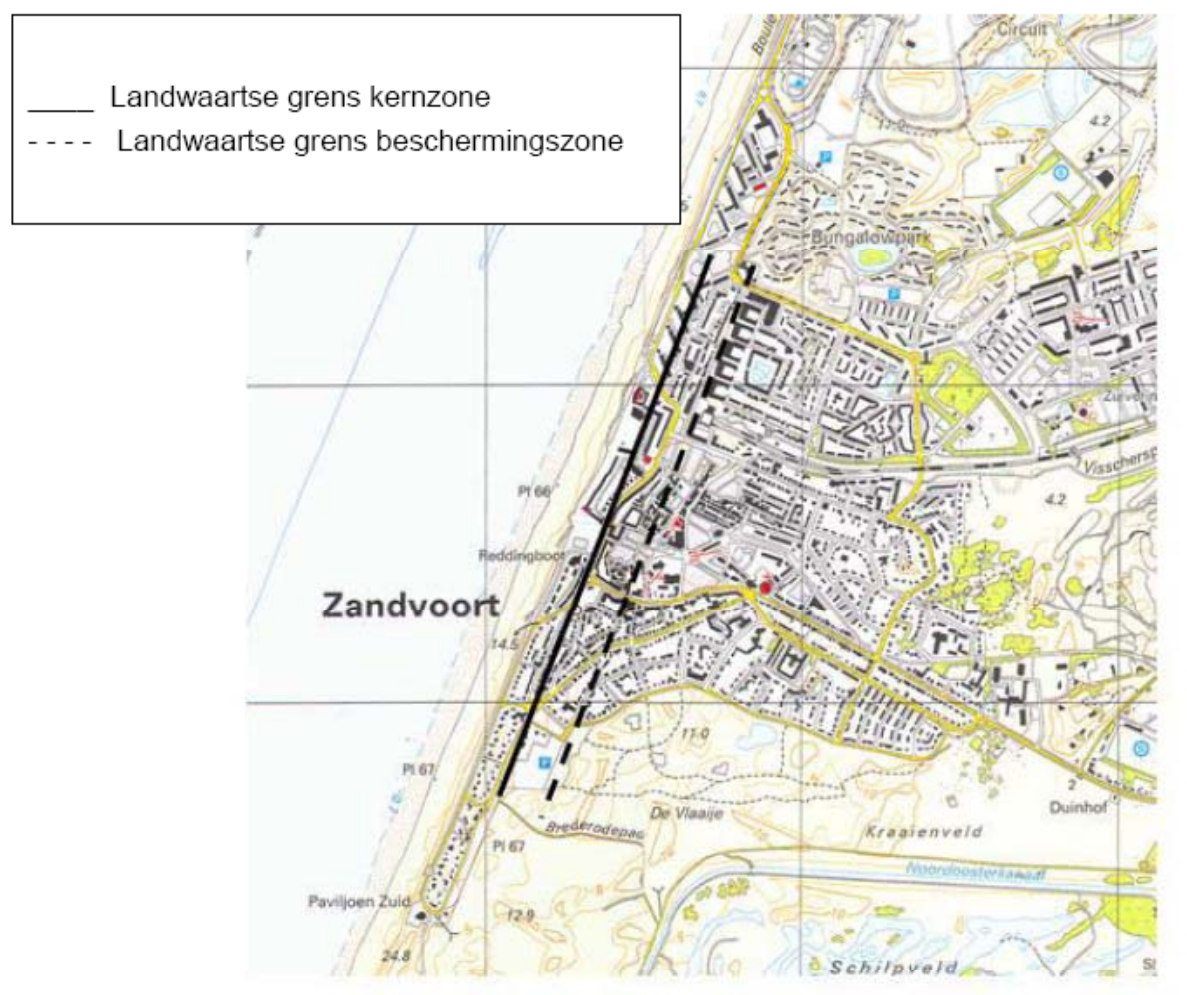

Important developments

Safety first

1. Dangers of sea level rising
2. Chance calculation of flood disasters
3. Who is responsible
4. Who is paying the damage

Safety First

Safety First

5. Own responsibility of the tourist town
6. Try to move risk lines
7. Focus on communication with all stakeholders
8. Try create win-win situations

Safety First

9. Develop external risk guidelines
10. Spatial planning should be proactive and accompanied by effective legislation

Recent changes in modern coastal management

Development of a European quality stamp by:

- A local identity
- Clean beaches
- Energy management
- Waste management
- Sustainable tourist behaviour
- Sewage treatment
- Traffic management

Strengths/weaknesses of Zandvoort as a tourist town

Strengths:

- Natural environment
- Physical infrastructure
- Circuit Park Zandvoort
- Small scale village
- Good living qualities

Weaknesses:

- Accessibility of the coast
- Ecological Main Structure
- Outdated buildings

Examples of continuous exchange of opinions with other partners

Development of structural beach pavilions

Structural beach pavilion Take Five

Examples of continuous exchange of opinions with other partners

A race track surrounded by a National Park

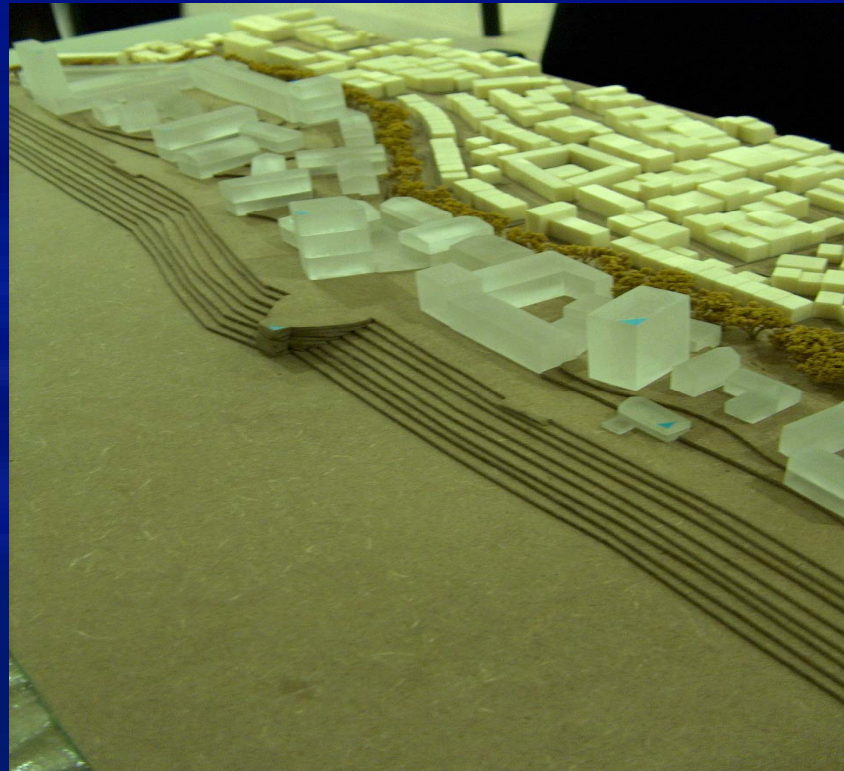

Circuit Park Zandvoort

A need to restructure

Development of a tourist village by restructuring the main boulevard in a sustainable way

The model of the new boulevard
